

## ABSTRACT

A tumor antigen peptide capable of inducing and/or activating HLA-A24-restricted and/or HLA-A2-restricted and tumor-specific cytotoxic T lymphocytes functions by providing a polynucleotide encoding the peptide and a complementary strand thereto, a recombinant vector containing the polynucleotide, a transformant containing the recombinant vector, a method for producing the peptide, an antibody against the peptide, a compound interacting with these entities and a method for screening for the compound, a pharmaceutical composition utilizing these entities, and a means for the diagnosis utilizing these entities.
